What citec can do for you

Why undertake an audit?

To assess the current state of your IT systems.

You should periodically take stock of where you are with your IT systems and especially before undertaking any significant planning or expenditure.

To get a detailed inventory of hardware, software, licenses, etc.

This may be necessary for insurance or regulatory compliance purposes. It also compiles valuable information for your IT support person.

Technology Assessment

Citec will carry out a check on where you are at with IT. Typically a gathering of preliminary information on software requirements, adequacy of existing hardware, data security and internal or external telecommunications interfaces. The result is a brief report listing findings, high-level recommendations and budget estimates for proposed steps.

Site Audit

A detailed inventory of hardware and software, licenses, network infrastructure and security measures in place. This includes a report on identified shortcomings and recommendations for improvement.

Security Audit

Physical security of servers, data security, network security, workstation security, threat management, work practices, policy and procedure all come under scrutiny by a Citec consultant in order to identify weaknesses that may expose your organization to unnecessary risks.

For information on other Citec services please visit <http://www.citec.biz> or request by phone, fax or email.
